Annotatsiya: Ushbu maqolada bugungi kunda ta’lim tizimida raqamli texnologiyalarning o‘rni haqida aytib o‘tilgan. Boshlang‘ich sinflardan boshlab innovatsion texnologiyalardan foydalanishning samaradorligi ko‘rsatib berilgan. Qolaversa, raqamli ta’lim texnologiyalardan foydalanish qoidalari haqida to‘xtalib o‘tilgan.

Kalit so‘zlar: raqamli texnologiya, innovatsion, o‘qituvchi, interfaol, maktab, universitet, muammo, boshlang‘ich ta’lim, pedagog, sinf, qoida, kompyuter, elektron doska, uzluksiz ta’lim, smartfon.

Abstract: This article discusses the role of digital technologies in the education system today. Effectiveness of using innovative technologies from primary grades has been demonstrated. In addition, the rules for the use of digital education technologies were discussed.

Keywords: digital technology, innovative, teacher, interactive, school, university, problem, primary education, pedagogue, class, rule, computer, electronic board, continuous education, smartphone.

Today, there is no industry without modern equipment and technology. A number of achievements can be achieved with the help of digital technologies in the field of education.

Today, modern information technologies are widely used in all areas. It will not be a mistake to say that this is a sign of advanced development and significantly facilitates our work. The use of digital educational technologies in education has a number of advantages. If teachers and trainers use information technologies correctly and appropriately during the lesson, the lesson process can be more effective than expected. For this, every teacher today must be computer literate. If he does not know how to use any technology, be it a computer, an electronic board or a TV, he will face a number of difficulties. The possibilities of digital technologies are enormous. Naturally, a person who knows how to use it will achieve great success.

It is known that the introduction of advanced pedagogy and new information technologies in education not only increases the effectiveness of classes, but also increases the effectiveness of classes, and independent and logical thinking, comprehensively developed and highly educated, also plays a role. an important role in the education of a virtuous person. scientific achievements in practice. Today, interest in the use of interactive methods and information technologies in the educational process is growing every day. One of the reasons for this is that until now, in traditional education, students were taught only to acquire ready-made knowledge, and the use of modern technologies teaches them to independently search for acquired knowledge, study, think independently, analyze and even make final conclusions independently.[1]

Today, attention is paid to modern technologies and interactive methods, starting from the younger grades. Students can easily use innovative technologies already from grades 1-2. It is no exaggeration to say that this is the first step taken to ensure that the child becomes a talented and mature worker in the future. Of course, primary school teachers play an invaluable role in this. Primary school students understand and remember what they see better than what they read. A child remembers better what he sees, the child's imagination grows thanks to what he has seen. This is why electronic boards and televisions are used in the educational process today.

Types of digital technologies. There are several types of digital technologies that should be used in primary education. In this regard, the following main types of digital technologies are worth mentioning: 1) training in digital technologies based on computer programs; 2) electronic modular technology; 3) distance education technology; 4) independent education technology; 5) individual approach technology; 6) Internet education technology; 7) national portal technology; 8) personal technologies of experienced teachers. It is advisable to use these types of digital technologies depending on the school environment and capabilities. For example, today comprehensive schools are equipped with modern computer technology. That's all in connection with the digitalization of computer training in primary education the use of technology is important for the sake of pleasure, speed and efficiency important. For this, the following should be done:

a) preparing computer versions of subjects;

b) providing students with computer capabilities and their use create mechanisms for;

c) knowledge of topics related to students through virtual communication and skill transfer;

g) animated and multimedia images of prepared educational materials present richly;

d) monitor the learning process of students define the methodology.[2, 480–484b.]

This approach has deepened the subjects of primary education allows teaching in this way. Digital technologies are unique one of the possibilities is the availability of updated educational materials. For this reason, from digital technologies in all types of education in recent times. The main attention is paid to the use.

Informatics in primary grades of the 2023-2024 academic year began to be taught. Computer literacy of students in this subject, data processing skills and the use of technical tools play an important role in the formation of culture. Therefore, this science digital technologies of primary

school teachers in the educational process it is necessary to organize additional training in the skill of using will be compatible.

There are several advantages of using digital teaching technologies for primary school teachers:

1. Attracting students. Digital learning tools provide interactive lessons that help engage and motivate students to learn.

2. Increase student productivity: Using digital learning gives students more freedom and efficiency in learning.

3. Collaboration opportunities: With the help of digital education technology, a collaborative relationship can be established between teachers and parents. Parents can monitor their children directly using social media or platforms like daily.com.[3, 755-760]

Digital education technology provides students with the opportunity to learn using modern tools. Students can access classes anytime and anywhere from computers, smartphones, tablets, and other electronic devices. Digital learning technologies help meet the new demands placed on students. Online learning materials are easily and visually accessible, and information can be searched quickly and conveniently.
