ADVANTAGES OF USING INTERACTIVE METHODS IN THE EDUCATIONAL PROCESS

Kamilov J.K., GSPI professor,

Abstract: the following article is the brightest evidence of how to navigate the students to innovate inventions without any stoppage. The author tells the integration of science and education with culture by pointing out the process of continuous study.

Keywords: integration, education, innovative, lifelong, study, education, specialist, dialogue, attitude, meir, method, mentor, coach, approach, personal, opinion chain, educational, processactivity.

Аннотация: данная статья является ярким примером того, как побудить студентов к инновационным изобретениям без каких-либо остановок. Автор рассказывает об интеграции науки и образования с культурой, указывая на процесс непрерывного обучения.

Ключевые слова: интеграция, образование, инновационное, на протяжении всей жизни, учеба, просвещение, специалист, диалог, отношение, меир, метод, наставник, коуч, подход, личность, цепочка мнений, образовательный процесс, активность.

Independent work in the Republic of Independent work is also a special role in the educational process in the educational process in the educational process. Currently, one of the important requirements for the organization of modern education is to achieve high results in a short time without spending overwide and physical force. In the process of education, it requires the level of pedagogical skills and skills to the learning process, which is to deliver theoretical knowledge, to create skills and skills.

This requires the use of interactive methods today. Therefore, properly used interactive methods deepen the knowledge of objective reality and increase the scientific and theoretical level of the integrity and training. Success selected interactive methods to some extent know and So far, many publications have been published in line with interactive methods and issues of use. Nevertheless, it is known that there are many scientific-theoretical, methodological, methodological and practical problems where this issue is to be addressed. In developing new knowledge, the personal opinion method was performed in the development, analysis, comparison, and issue relevant conclusions in strengthening the knowledge gained.

Interactive methods, although it provides for some efficiency in education or educational goals, but each of them has different capabilities in the educational or training process.

Therefore, it is advisable for the topic under study in the selection of interactive methods, the issue of a problem or resolution. In addition, the effectiveness of interactive methods is the age of students student, PS Interactive methods mean methods that activate students and encourage independent thinking, become students in the center of the educational process. The use of these methods encourages the teacher to actively participate. The learner participates throughout the process.

The advantages of the approach to the student in the center are manifested in the following:

- study with higher learning efficiency;

- high motivation of the trainee;
- accounting of previously acquired knowledge;
- educational process in accordance with the goals and needs of the student Republic of Uzbekistan
- initiative and responsibility of the student;
- support;
- practical study;
- creating conditions for bilateral opinions.

The application of the Case Stage learning method in the study of various situations is a learning process aimed at organizing the study of ordinary situations in life or at requiring students to appropriately solve relevant problems based on artificially created situations. This method allows students to model their practical activities in diagnosing a life situation, expressing hypotheses, identifying problems, collecting additional information, clarifying hypotheses and solving problems and designing specific stages of their implementation. The use of cases dedicated to certain life situations connects the learning process with real life. When considering Case, trainees create a learning process. In this process, real situations arise when they exchange views. Analysis of trainees, The Blits method (Blits - quick, instant) is a method of teaching short, accurate, accurate and quick answers to asked questions. In educational institutions, questions on this method are asked mainly by teachers. Answers to the questions asked can be returned in a collective, group, pair or individual order. The form of response is determined by the type of classes, the complexity of the topic studied, the coverage of students.

The essence of the "problem situation" method is to create and solve problem situations during classes, which are based on didactic contradictions used in organizing and conducting classes.

The basic concepts of the problem situation method concept are "problem situation," "problem," "problem search," "problem solution," "contradictions," "methods." The initial stage of the "problem situation" method is to identify a problem situation in which a known or partially studied topic is determined.

begins the process of fully understanding bias, defining, analyzing, generalizing, inferring, and correctly expressing its underlying relationships. In this case, the problem becomes a problem to be solved. You can see from this dependency that every problem is a problem, but not all problems become a problem. In the process of using this method, directions that help find a solution to the problem are not indicated or limited.

This is characteristic of a problematic issue. If the problem contains any solution parameters, then this is a problematic issue, known or partially understood by the topic under study. Any problem task also covers a known problem and the corresponding problem situation.

However, as noted above, not all problems can be a problem. A person always solves problematic issues. If he has problems, he turns them into problematic issues.

At the same time, the expediency of using interactive methods, along with various modern, advanced pedagogical and information and communication technologies, depends on their positive features.
